- A. Update all custom code that calls customer master transactions
- B. Convert all vendors to customer master transactions
- C. Convert all customers and vendors to business partners
- D. Convert all open sales orders to the new data model

Answer: C

NEW QUESTION: 3

Your network contains an Active Directory forest named adatum.com. All servers run Windows Server 2012 R2. The domain contains four servers. The servers are configured as shown in the following table.

You need to deploy IP Address Management (IPAM) to manage DNS and DHCP.

On which server should you install IPAM?

- A. Server1
- B. Server3
- C. Server2
- D. Server4

Answer: D

Explanation:

An IPAM server is intended as a single-purpose server. It is not recommended to collocate other network infrastructure roles such as DNS or DHCP on the same server. IPAM installation is not supported on a domain controller, and discovery of DHCP servers will be disabled if you install IPAM on a server that is also running the DHCP Server service. The following features and tools are automatically installed when you install IPAM Server.
