### **NEW QUESTION: 1**

When configuring a BYOD portal, which two tasks must be completed? (Choose two.)

- A.** Create endpoint identity groups.
- B.** Create external identity sources.
- C.** Customize device portals.
- D.** Enable policy services.
- E.** Create a client provisioning portal.

**Answer: A,C**

Explanation:

Explanation/Reference

Bring Your Own Device Portal Employees do not access this portal directly.

Employees are redirected to the Bring Your Own Device (BYOD) portal when registering personal devices using native supplicants. The first time employees attempt to access the network using a personal device, they may be prompted to manually download and launch the Network Setup Assistant (NSA) wizard and be guided through registering and installing the native supplicant. After they have registered a device, they can use the My Devices portal to manage it.

My Devices Portal Employees can access the My Devices portal directly.

Some network devices that need network access are not supported by native supplicant provisioning and cannot be registered using the BYOD portal. However, employees can add and register personal devices, whose operating systems are not supported or do not have web browsers (such as printers, Internet radios, and other devices), using the My Devices portal. Employees can add and manage new devices by entering the MAC address for the device. When employees add devices using the My Devices portal, Cisco ISE adds the devices to the Endpoints page as members of the RegisteredDevices endpoint identity group (unless already statically assigned to a different endpoint identity group).
