Protocol Analysis - Accurate WCNA - Wireshark Certified Network Analyst Practice Exam Printable PDF

How to pass WCNA actual test quickly and smoothly, Our WCNA real exam prep is updated in a

high speed, We are hopeful that you will like our products.

Love is precious and the price of freedom is higher, Even though our WCNA learning materials have received the warm reception and quick sale in many countries, in order to help as many IT workers as possible to pass the IT exam and get the IT certification successfully, we still keep a favorable price for our best WCNA test simulate.

Using our WCNA test online, you will enjoy more warm and convenient online service, A lot of our new customers don't know how to buy our WCNA exam questions.

Besides, we have 7/24 customer service, if you have any questions or other doubts about our WCNA easy learning material, please feel free to contact us, we are always here to reply you.

Any exploitation of this site or its contents for any commercial purpose, Also, like the actual exam, Use or create WCNA notes as you go and re-visit questions that you Missed.

WCNA training materials of us are pass guaranteed, and if you can't pass the exam one time, we are money back guaranteed, Not only because that our WCNA study materials can work as the guarantee to help them pass, but also because that our WCNA learning questions are high effective according to their accuracy.

At present, WCNA certification really enjoys tremendous popularity, You can check out the interface, question quality and usability of our practice exams before you decide to buy Rayong.

Getting Protocol Analysis Wireshark Certification WCNA IT certification is setting the pathway to the height of your career, The quality and quantities of WCNA pass4sure dumps are strictly checked and controlled by the experts.

NEW QUESTION: 1

What is the difference between the OCSP (Online Certificate Status Protocol) and a Certificate Revocation List (CRL)?

- A.** The OCSP (Online Certificate Status Protocol) is a way to check the attributes of a certificate and a Certificate Revocation List (CRL) is used by Certificate Authorities.
- B.** The OCSP (Online Certificate Status Protocol) provides real-time certificate checks and a Certificate Revocation List (CRL) has a delay in the updates.
- C.** The OCSP (Online Certificate Status Protocol) is used only by Active Directory and a Certificate Revocation List (CRL) is used by Certificate Authorities
- D.** The OCSP (Online Certificate Status Protocol) is a proprietary certificate mechanism developed by Microsoft and a Certificate Revocation List (CRL) is an open standard.

Answer: B

Explanation:

A Certificate Revocation List (CRL) is periodically update by a Certificate Authority (CA), where there may be a delay from the time a certificate has been revoked versus the time it propagates into the Certificate Revocation List (CRL).

The CA can revoke certificates and provide an update service to the other members of the PKI via a certificate revocation list (CRL), which is a list of non-valid certificates that should not be accepted by any member of the PKI. The use of public key (asymmetric) cryptography has enabled more effective use of symmetric cryptography as well as several other important features,

such as greater access control, nonrepudiation, and digital signatures.

In transactions where there is a need for real-time checks, the Online Certificate Status Protocol can be used which can obtain the revocation status in a more timely fashion.

From RFC 2560

In lieu of or as a supplement to checking against a periodic CRL, it may be necessary to obtain timely information regarding the revocation status of a certificate (cf. [RFC2459], Section 3.3).

Examples include high-value funds transfer or large stock trades.

The Online Certificate Status Protocol (OCSP) enables applications to determine the (revocation)

state of an identified certificate. OCSP may be used to satisfy some of the operational requirements of providing more timely revocation information than is possible with CRLs and may

also be used to obtain additional status information. An OCSP client issues a status request to an

OCSP responder and suspends acceptance of the certificate in question until the responder provides a response.

This protocol specifies the data that needs to be exchanged between an application checking the

status of a certificate and the server providing that status.

The following answers are incorrect:

-

The OCSP (Online Certificate Status Protocol) is a proprietary certificate mechanism developed by Microsoft and a Certificate Revocation List (CRL) is an open standard.

-

The OCSP (Online Certificate Status Protocol) is used only by Active Directory and a Certificate Revocation List (CRL) is used by Certificate Authorities.

-

The OCSP (Online Certificate Status Protocol) is a way to check the attributes of a certificate and a Certificate Revocation List (CRL) is used by Certificate Authorities.

NEW QUESTION: 2

Management wants to scan servers for vulnerabilities on a periodic basis. Management has decided that the scan frequency should be determined only by vendor patch schedules and the organization's application deployment schedule. Which of the following would force the organization to conduct an out-of-cycle vulnerability scan?

A. A critical bug fix in the organization's application

B. False positives identified in production

C. A vendor releases a critical patch update

D. Newly discovered PII on a server

Answer: C

NEW QUESTION: 3

A technician connects a Cisco ASR 9001 Router with a 40 Gigabit Ethernet modular port adapter to an older model Cisco switch through a transceiver. The older Cisco switch has interfaces that only support up to 100-Mb half-duplex. What should you tell the technician about this configuration?

- A. Set the transceiver to half/full duplex mode so that the devices can communicate.
- B. On the Cisco ASR 9001 Router, set the duplex and the speed to "auto," so that the devices can communicate.
- C. The devices are unable to communicate.
- D. On the older model Cisco switch, set the speed to "auto," so that the devices can communicate.

Answer: C

NEW QUESTION: 4

ユーザーがVPCウィザードを使用して、パブリックサブネットとプライベートサブネットを持つVPCを作成しました。VPCにはCIDRがあります

20.0.0.0/16。パブリックサブネットはCIDR

20.0.1.0/24を使用します。ユーザーは、パブリックサブネット（ポート80でWebサーバーをホストし、プライベートサブネット（ポート3306）でDBサーバーをホストする予定です。ユーザーは、パブリックサブネット（WebSecGrp）とプライベートサブネット（DBSecGrp）のセキュリティグループを構成しています）プライベートサブネットデータベースセキュリティグループ（DBSecGrp）に必要な以下のエントリはどれですか？

- A. 宛先NATインスタンスIPに対してポート80での送信を許可する
- B. ソースWebサーバーセキュリティグループ（WebSecGrp）のポート3306でインバウンドを許可
- C. 宛先Webサーバーセキュリティグループ（WebSecGrp）のポート3306での送信を許可
- D. ソース20.0.0.0/16からのポート3306でのインバウンドを許可

Answer: B

Explanation:

説明

ユーザーはVPCでサブネットを作成し、そのサブネット内でインスタンスを起動できます。ユーザーがウェブサーバーとDBサーバーをそれぞれホストするパブリックプライベートサブネットを作成した場合、ユーザーはプライベートサブネットのインスタンスがDBポートのパブリックサブネットからインバウンドトラフィックを受信できるように構成する必要があります。したがって、ポートを構成します

ソースがWebサーバーセキュリティグループ（WebSecGrp）のインバウンドの3306。ルートテーブルはトラフィックをプライベートサブネットからNATインスタンスに転送するため、ユーザーは宛先0.0.0.0/0のポート80および443を構成する必要があります。
