NEW QUESTION: 1

Sara, an application developer, implemented error and exception handling alongside input validation. Which of the following does this help prevent?

- A. Buffer overflow
- B. Pop-up blockers
- C. Fuzzing
- D. Cross-site scripting

Answer: A

Explanation:

Buffer overflow is an exploit at programming error, bugs and flaws. It occurs when an application is fed more input data than it is programmed to handle. This may cause the application to terminate or to write data beyond the end of the allocated space in memory. The termination of the application may cause the system to send the data with temporary access to privileged levels in the system, while overwriting can cause important data to be lost. Proper error and exception handling and input validation will help prevent Buffer overflow exploits.

NEW QUESTION: 2

変更管理システムへのプロセスの実装は、以下の後に行われます。

- A. サンドボックス内での初期テスト
- B. 仕入先との協議
- C. CABによる承認
- D. 厳格な査読。

Answer: C
