Fortunately, ITCertKing can provide you the most reliable information about the actual exams, We are proud of our 250-559 braindumps pdf with high pass rate and good reputation.

NEW QUESTION: 1

Which NGE IKE Diffie-Hellman group identifier has the strongest cryptographic properties?

- A. group 24
- B. group 20
- C. group 10
- D. group 5

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Elliptic Curve

Elliptic Curve Cryptography (ECC) is a newer alternative to public key cryptography. ECC

operates on

elliptic curves over finite fields. The main advantage of elliptic curves is their efficiency. They

can offer the

same level of security for modular arithmetic operations over much smaller prime fields. Thus, the relative

performance of ECC algorithms is significantly better than traditional public key cryptography.

ECDH is a method for key exchange and ECDSA is used for digital signatures. ECDH and ECDSA

using

256-bit prime modulus secure elliptic curves provide adequate protection for sensitive

information. ECDH

and ECDSA over 384-bit prime modulus secure elliptic curves are required to protect classified information

of higher importance.
