NEW QUESTION: 3

A deployment professional is asked to clean up several failed events that belong to a long running business process in a clustered WebSphere Process Server environment. These failed events were created as a result of an identified outage of the backend database. Several instances of this business process were created during this outage and have been deleted. What corrective action should the deployment professional take to clean up these failed events?

A. Find the events in the Failed Event Manager that belong to the Business Flow Manager hold queue and replay the Hold queue messages.

B. Use the `configRecoveryForCluster` command to specify a cluster, that is configured to manage failed events.

C. Create a custom program and use the `queryFailedEvents` method of the `FailedEventManager` interface to query all the events associated with this business process, and use the `discardFailedEvents` method.

D. Create a custom program and use the Business Flow Manager API `queryHldQueueMessage` to query all the events and `deleteHldQueueMessage` to discard the failed events.

Answer: A
