#### **NEW QUESTION: 1**

A corporation is implementing Oracle Fusion Workforce Compensation and needs to set up the following for all employees:

- \* Salary paid based on the grades of employees.
- \* Car allowance paid based on the department and position.
- \* Spot bonus paid based on a committee's decision.

Identify the correct option for the setup. (Choose the best answer.)

- A.** Set up a salary basis for "Salary" and associate a grade rate matrix to it, and add a car allowance and spot bonus as components for the salary basis along with Salary. Attach the required payroll elements to the salary. Have salary validations to restrict access and payment for specific departments and positions.
- B.** Set up on individual compensation plan with all three options. Add the required payroll elements and add restriction based on eligibility profiles and plan access.
- C.** Set up Salary and the spot bonus as two salary bases, because there are no eligibility restrictions. Set up the car allowance as an individual compensation plan. Add the required payroll elements and add eligibility profiles for the car allowance for specific departments and positions.
- D.** Set up a salary basis for "Salary" and associate a grade rate matrix and the payroll element to it. Set up individual compensation plans for the car allowance and spot bonus, and restrict the access to line manager and HR specialist respectively. Additionally, add an eligibility profile to the car allowance to restrict it to specific departments and positions.

B. TRUE

**Answer: B**

### **NEW QUESTION: 3**

What are three benefits of GLBP? (Choose three.)

A. GLBP supports clear text and MD5 password authentication between GLBP group members.

B. GLBP elects two AVGs and two standby AVGs for redundancy.

C. GLBP can load share traffic across a maximum of four routers.

D. GLBP supports up to 1024 virtual routers.

E. GLBP is an open source standardized protocol that can be used with multiple vendors.

F. GLBP supports up to eight virtual forwarders per GLBP group.

**Answer: A,C,D**

Explanation:

[http://www.cisco.com/en/US/docs/ios/12\\_2s/feature/guide/fs\\_glb2.html](http://www.cisco.com/en/US/docs/ios/12_2s/feature/guide/fs_glb2.html)

Load Sharing

You can configure GLBP in such a way that traffic from LAN clients can be shared by multiple routers, thereby sharing the traffic load more equitably among available routers. Multiple Virtual Routers GLBP supports up to 1024 virtual routers (GLBP groups) on each physical interface of a router, and up to four virtual forwarders per group.

Preemption

The redundancy scheme of GLBP enables you to preempt an active virtual gateway with a higher priority backup virtual gateway that has become available. Forwarder preemption works in a similar way, except that forwarder preemption uses weighting instead of priority and is enabled by default.

Authentication

You can use a simple text password authentication scheme between GLBP group members to detect configuration errors. A router within a GLBP group with a different authentication string than other routers will be ignored by other group members.

[http://www.cisco.com/en/US/docs/switches/datacenter/sw/5\\_x/nx-s/unicast/configuration/guide/l3\\_glb.html](http://www.cisco.com/en/US/docs/switches/datacenter/sw/5_x/nx-s/unicast/configuration/guide/l3_glb.html)

GLBP Authentication

GLBP has three authentication types:

MD5 authentication

Plain text authentication

No authentication

MD5 authentication provides greater security than plain text authentication. MD5 authentication allows each GLBP group member to use a secret key to generate a keyed MD5 hash that is part of the outgoing packet. At the receiving end, a keyed hash of an incoming packet is generated. If the hash within the incoming packet does not match the generated hash, the packet is ignored.

The key for the MD5 hash can either be given directly in the configuration using a key string or supplied indirectly through a key chain. You can also choose to use a simple password in plain text to authenticate GLBP packets, or choose no authentication for GLBP.
