**NEW QUESTION: 1**
Which of the following prerequisites should be met before adding a processor to a server? (Select TWO).
**A.** Ensure the OS is not using a SMP kernel
**B.** Ensure both processors support NUMA
**C.** Ensure the operating system supports multiple processors
**D.** Ensure both processors have the same step codes
**E.** Ensure all processes running on the server support multiple processors
**Answer: C,D**

**NEW QUESTION: 2**
You receive a priority 1 trouble ticket that there is OSPF route instability in the data center core Cisco Nexus
7018 Switches. Which command is useful to help validate a theory that hello packets are being throttled?
**A.** N7018# show control-plane class copp-system-class-critical
**B.** N7018# show policy-map interface control-plane
**C.** N7018# show copp status
**D.** N7018# show copp statistics
**E.** N7018# show class-map interface control-plane
**F.** N7018# show service-policy interface control-plane
**Answer: B**

**NEW QUESTION: 3**
You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the Hyper-V server role installed. Server1 has 8 GB of RAM.
Server1 hosts five virtual machines that run Windows Server 2012 R2.
The settings of a virtual machine named Server3 are configured as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that when Server1 restarts, Server3 automatically resumes without intervention. The solution must prevent data loss.
Which settings should you modify?
**A.** Automatic Start Action
**B.** Automatic Stop Action
**C.** BIOS
**D.** Integration Services
**Answer: B**
Explanation:
The Automatic Stop Action setting should be modified because it will allow you to configure: "

Save the virtual machine state" option instructs Hyper-V Virtual Machine Management Service to save the virtual machine state on the local disk when the Hyper-V Server shuts down. OR " Turn Off the virtual machine" is used by the Hyper-V Management Service (VMMS.exe) to gracefully turn off the virtual machine. OR " Shut down the guest operating system" is successful only if the "Hyper-V Shutdown" guest service is running in the virtual machine. The guest service is required to be running in the virtual machine as the Hyper-V VMMS.EXE process will trigger Windows Exit message which is received by the service. Once the message is received by the guest service, it takes the necessary actions to shut down the virtual machine. Reference: http://www.altaro.com/hyper-v/hyper-v-automatic-start-and-stop-action/

**NEW QUESTION: 4**
Which tab in the AppInternals Xpert interface do you use to enable continuous tracing for JIDA and .Net data adapter instances?
**A.** Configure Groups
**B.** Users
**C.** Metric Filters
**D.** Schedule
**Answer: A**
