It' s quite cost- efficient for you.

NEW QUESTION: 1

- A. Option D
- B. Option C
- C. Option A
- D. Option B

Answer: C

NEW QUESTION: 2

- A. priocntl -c FSS -g
- B. dispadmin -c FSS -g
- C. dispadmin - c FSS
- D. prionctl -c FSS

Answer: B

Explanation:

The dispadmin command displays or changes process scheduler parameters while the system is running.

-c class

Specifies the class whose parameters are to be displayed or changed. Valid class values are: RT for the real-time class, TS for the time-sharing class, IA for the inter-active class, FSS for the fair-share class, and FX for the fixed-priority class. The time-sharing and inter- active classes share the same scheduler, so changes to the scheduling parameters of one will change those of the other.

-g

Gets the parameters for the specified class and writes them to the standard output.

NEW QUESTION: 3

A company wants to deploy Aruba Instant APs (IAPs) at branch offices and have a configuration automatically deployed to the APs. How can network administrators achieve this goal?

- A. Set up an Aruba Activate account and upload configuration templates and provisioning rules to it.
- B. Upload a configuration template on a management station and then connect that station to the Instant SSI
- C. Set up configuration templates on AirWave and Aruba Activate provisioning rules that direct the APs to AirWave.
- D. Configure Aruba ClearPass to discover the APs and push configurations to them.

Answer: D

NEW QUESTION: 4

You are designing a .NET Framework 4 solution that contains a Windows Presentation Foundation (WPF) application and a Windows Communication Framework (WCF) Web service. The WPF application will be deployed to users' desktops located in the company's corporate network. The WCF Web service will be deployed to a Web farm located in the company's perimeter network. The firewall between the perimeter network and the Internet allows only HTTP and HTTPS traffic.

You need to recommend an approach for minimizing the attack surface of the WCF Web service.

What should you recommend?

- A. Set up an SSL certificate on the server.
- B. Configure a WCF endpoint to use the NetTcpBinding binding.
- C. Configure a WCF endpoint to use the basicHttpBinding binding.
- D. Add a load-balancing router to the Web farm configuration.

Answer: A
