### **NEW QUESTION: 3**

A sysadmin has created the below mentioned policy on an S3 bucket named cloudacademy. The bucket has both AWS.jpg and index.html objects. What does this policy define?

- A. It will throw an error for the wrong action and does not allow to save the policy
- B. It will make the AWS.jpg object as public
- C. It will make all the objects as well as the bucket public
- D. It will make the AWS.jpg as well as the cloudacademy bucket as public

**Answer: A**

Explanation:

Explanation

A sysadmin can grant permission to the S3 objects or the buckets to any user or make objects public using the bucket policy and user policy. Both use the JSON-based access policy language.

Generally, if user is defining the ACL on the bucket, the objects in the bucket do not inherit it and vice a versa. The bucket policy can be defined at the bucket level which allows the objects as well as the bucket to be public with a single policy applied to that bucket. In the below policy the action says "S3:ListBucket" for effect Allow and when there is no bucket name mentioned as a part of the resource, it will throw an error and not save the policy.

## NEW QUESTION: 4

A. Option C

B. Option D

C. Option B

D. Option A

**Answer: D**

Explanation:

Explanation

In AD RMS rights can be assigned to users who have a federated trust with Active Directory Federation Services (AD FS). This enables an organization to share access to rights-protected content with another organization without having to establish a separate Active Directory trust or Active Directory Rights Management Services (AD RMS) infrastructure.
