NEW QUESTION: 1

Which of the following is NOT a responsibility of service transition?

- A. To design and develop capabilities for service management
- B. To plan the resource requirements to manage a release
- C. To provide quality knowledge of change and release and deployment management
- D. To ensure that a service can be managed, operated and supported within constraints specified by design

Answer: A

NEW QUESTION: 2

A storage administrator notices the FCoE traffic is only given 30% of the bandwidth allocation when a 10-GbE FCoE path becomes fully saturated. How can a storage administrator check the bandwidth allocation for a particular FCoE port in Data ONTAP Cluster Mode?

- A. Use the dcb show command at the clustershell.
- B. There is no problem. This is the normal allocation and it cannot be changed.
- C. Use the dcb show command at the nodeshell
- D. The problem cannot be detected on the storage. Check the switch.

Answer: C

NEW QUESTION: 3

Exhibit:

Which two features are enabled on the upstream switch? (Choose 2)

- A. feature fcoe-npv
- B. feature fcoe

- C. feature npv
- D. feature fport-channel-trunk
- E. feature npiv

Answer: A,E

NEW QUESTION: 4

DRAG DROP

DRAG DROP

You are developing an ASP.NET MVC application that allows users to log on by using a third-party authenticator.

You need to configure Microsoft Azure Access Control Services and the application.

Which five actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Explanation:

Explanation:

Box 1: Create a service namespace

The first step is to create an ACS Namespace. This is your Security Token Services (STS) that will generate Signed Identity tokens to be consumed by WAP. This will also be the only STS that WAP will trust.

Box 2: Register the application as a relaying partner.

Now that the Namespace is created, you will have to tell it about the WAP Portals that is expecting tokens from it. We add the WAP Tenant Portal as a Relying Party to ACS (Access Control Services).

Box 3: Add a Security Token Service (STS) reference in Visual Studio 2012.

Now that the Namespace is created, you will have to tell it about the WAP Portals that is expecting tokens from it.

1. Click on Relying Party Applications and click on Add to add the Windows Azure Pack tenant Portal as a Relying Party to this namespace. This essentially tells the ACS namespace that the Tenant Portal is expecting it to provide user identities.
2. You will now go to the Add Relying Party Application page where you can enter details about the WAP tenant Portal.
3. The easier option is to provide the federation Metadata from the tenant portal. Save the XML file locally on your computer
4. Now back in the ACS management portal, Upload the federation metadata file and provide a Display Name for the Relying Party.
5. Scroll Down to the Token Format section and choose the token format to be 'JWT'. By Default, the Windows Live Identity Provider will be selected. Deselect it if you do not want to allow users to sign in using their Live id. Under the Token Signing Settings section, select X.509 Certificate as the Type. Click on Save.

Box 4: Add the third-party as the identity provider.

We have our ACS and WAP portals setup. We now have to find a source of Identities that can be flown in to the WAP Portals through ACS. We configure external services to act as Identity Providers

Box 5: Generate provider rules for claims

We now have our Relying Party and our Identity Providers set up. We should now tell ACS how to transform the incoming Claims from these Identity providers so that the Relying Party can understand it. We do that using Rule Groups which are a set of rules that govern

Claim Transformation. Since, we have two identity Providers, we will have to create a rule for each of these.
