Answer: D
Explanation:
http://technet.microsoft.com/en-us/library/cc960573.aspx
Create a site for each LAN, or set of LANs, that are connected by a high speed backbone, and assign the
site a name. Connectivity within the site must be reliable and always available. This would mean 5 sites Site
links are transitive, so if site A is connected to site B, and site B is connected to site C, then the KCC
assumes that domain controllers in site A can communicate with domain controllers in site C.

You only need to create a site link between site A and site C if there is in fact a distinct network connection between those two sites.
This would mean 3 sitelinks
So answer is "Five sites and three site links"
