You must try our products to believe this fact, And you can try our ISO2018LA study materials by free downloading the demos to know which one is your favorite, Though there are three versions of the ISO2018LA practice braindumps: the PDF, Software and APP online, i love the PDF version the most for its printable advantage which is unique and special.

Welcome to select and purchase our ISO2018LA practice materials, GAQM brings another certification ISO2018LA exam which is tough and it takes alot of hard work to pass it within first attempt.

Our website not only provides you with the best GAQM ISO2018LA practice exam materials, but also with the most comprehensive service, In addition, we can promise the updating system is free for you.

### **NEW QUESTION: 1**

ある会社には、北米とヨーロッパに拠点があります。同社はAzure SQL

Databaseを使用してビジネスアプリをサポートしています。

地域全体が停止した場合、従業員はアプリのデータにアクセスできる必要があります。次の要件を備えたマルチリージョン可用性ソリューションが必要です。

\*セカンダリリージョンのデータへの読み取りアクセスは、プライマリリージョンが停止した場合にのみ使用可能でなければなりません。

\* Azure SQL

Databaseのコンピューティングレイヤーとストレージレイヤーを統合し、一緒に複製する必要があります。

マルチリージョンの高可用性ソリューションを設計する必要があります。

何をお勧めしますか？回答するには、回答領域で適切な値を選択します。

注：それぞれの正しい選択には1ポイントの価値があります。

### **Answer:**

Explanation:

Explanation

Box 1: Standard

The following table describes the types of storage accounts and their capabilities:

Box 2: Geo-redundant storage

If your storage account has GRS enabled, then your data is durable even in the case of a complete regional outage or a disaster in which the primary region isn't recoverable.

Note: If you opt for GRS, you have two related options to choose from:

GRS replicates your data to another data center in a secondary region, but that data is available to be read only if Microsoft initiates a failover from the primary to secondary region.

Read-access geo-redundant storage (RA-GRS) is based on GRS. RA-GRS replicates your data to another data center in a secondary region, and also provides you with the option to read from the secondary region. With RA-GRS, you can read from the secondary region regardless of whether Microsoft initiates a failover from the primary to secondary region.

## NEW QUESTION: 2

- A. An unbound model
- B. DNS round-robin
- C. A bound model
- D. A Layer 7 load balancer

**Answer: A,D**

Explanation:

You should use an unbound model. With an unbound model, a single namespace is used across two datacenters.

You should use a Layer 7 load balancer. In this scenario, a DAG has active databases across two datacenters.

Users are distributed with a load balancer across the two datacenters.

A Layer 7 load balancer checks service health at the application level.

You should not use a bound model. A bound model uses two separate namespaces across two datacenters.

You should not use DNS round-robin. DNS round-robin load balancing uses a single namespace, but it does not check the health of the application or server.

## NEW QUESTION: 3

You want to change an existing Oracle Clusterware standard Cluster to an Oracle Flex Cluster. There is Grid Naming Service (GNS) and Flex ASM configured right now. In what order do you need to take the following steps?

1. Stop Oracle Clusterware
2. Determine the current mode of the cluster
3. Ensure that the GNS is configured with a fixed VIP.
4. Change the mode of the cluster to be an Oracle Flex Cluster.
5. Use the Oracle Automatic Storage Management Configuration Assistant (ASMCA) to enable Oracle Flex ASM in the cluster
6. Start Oracle Clusterware

A. 2, 3, 4, 5, 1, 6

B. 1, 2, 3, 4, 5, 6

C. 1, 2, 3, 5, 4, 6

D. 2, 3, 5, 4, 1, 6

**Answer: A**
