#### **NEW QUESTION: 1**

Which of the following problems can be solved by IGMP Snooping?

- A. Validity of IGMP Report messages.
- B. Broadcasting of multicast data on Layer 2 devices.
- C. A router receives large quantities of IGMP Report messages due to the existence of large number of hosts on the network.
- D. Receiver hosts support only IGPv2, but only the SSM model is used on the network.

**Answer: B**

#### **NEW QUESTION: 2**

Drag and drop the relative AP densities for data, voice and location services from the left to the appropriate categories on the right.

**Answer:**

Explanation:

#### **NEW QUESTION: 3**

You have an Azure subscription named Subscription1. Subscription1 contains a virtual machine named VM1.

You install and configure a web server and a DNS server on VM1.  
VM1 has the effective network security rules shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Box 1:

Rule2 blocks ports 50-60, which includes port 53, the DNS port. Internet users can reach to the Web server, since it uses port 80.

Box 2:

If Rule2 is removed internet users can reach the DNS server as well.

Note: Rules are processed in priority order, with lower numbers processed before higher numbers, because lower numbers have higher priority. Processing stops once traffic matches a rule, as a result, any rules that exist with lower priorities (higher numbers) that have the same attributes as rules with higher priorities are not processed.
